

***You're interested in purchasing a new or used carousel system. You've looked at the carousel manufacturer's software and found it doesn't fit your needs. Or perhaps they've told you to adapt your business to their software design and architecture. Worse yet, you have an existing carousel system with old software that you're outgrowing.***

***We'll look no further - the Spin Doctor is In! E.D.G. Enterprises, Inc. (EDGE) has been supplying software for carousels since 1992. Our staff has years of software experience and in carousel system installation, implementation, and integration. Our products are designed for the most common platforms – Windows, MS SQL Server and Oracle.***

***We clearly blow-away all of the manufacturer's software. In fact, we've been contracted by several of the carousel manufacturers to provide solutions their products simply couldn't handle.***

***In addition, our software operates on almost every common carousel on the market. We have customers that run different manufacturer's carousels in a single location. What does that buy you? You have a choice in carousels and can negotiate for the best price when you want to add to your existing system.***

## PRODUCTS

We have several products for carousel systems. Ranging from single computer systems designed to handle one pod of up to 12 Horizontal or Vertical Carousels, or Vertical Lift Modules to multi workstation systems with unlimited scalability. Of course, each has built-in host interface capability to communicate with your financial, ERP or MRP systems.

## USER FRIENDLY

Do you want User Friendly? How about Windows 7/8? Take a good look at the carousel operations screen below -- a GUI that emulates your system.

## CONFIGUREABILITY

Scope is never an issue. We have implemented systems with over 20 carousels and conveyor. Our systems are sophisticated enough to handle every common (and a few unusual) system designs such as:

- Horizontal, Vertical Carousels & Vertical Lift Modules
- Batching to 96 Simultaneous Orders at each Station
- Static Pick, Static Pass
- Static Pick, Dynamic Pass
- Dynamic (Continuous) Pick, Static Pass
- Dynamic (Continuous) Pick, Dynamic Pass
- Parallel Pick and Consolidate
- Mirrored SKU/POD Consignment
- Universal Pod Picking with Light Directed Flow Rack
- Manufacturing Support
- Consolidation
- Remote Kitting
- Raw Materials & Finished Goods
- Off-Carousel Inventory Management
- Complementary Conveyor Systems with Pre-Batching

## ADAPTABILITY

The reason we can handle any size project is our architecture (Windows 7 & 8 and SQL Server). However, if you require a different database or network operating software to reduce your maintenance burden (i.e. Sybase, SQLServer, Netware, etc.), we'll conform to your requirements. We can run more than 20 databases with our products. Can the Carousel companies make that claim?

### Std. Software Architecture

- Microsoft Windows 7 & 8
- SQL Server® (std. for multi-pods)
- Client/Server

## FUNCTIONALITY

Here's another great reason to consider our software. We don't just manage carousels, we also provide complete Warehouse Management capability. From Receiving through Shipping, with everything in between, we've got it all. This is a key point for several reasons. Why rely on two independent systems to run your carousels and your warehouse? Consider the maintenance burden; the potential finger-pointing when a problem arises; the headaches of making the systems integrate both electronically, as well as, your warehouse process flow.

What does our software provide? Here's a brief list:

- Receiving and Allocation with RF
- Conveyor Induction and Tracking of Pallets/Totes
- Cross-Docking with RF
- Quarantining and Inspection
- SKUs with Customer Configurable UoM
- Directed Put-Away and Picking with RF
- Directed Cycle Counting with RF
- Directed Deplenishment with RF
- Voice Data Management
- RFID Enabled
- Task Interleaving
- Warehouse to Warehouse Transfers
- QC Checking, Consolidation & Packing & Shipping
- Maintenance Management
- Virtually Unlimited Warehouse Zoning
- Unlimited Supervisory Reports

## PRICE

Our software will save you money in the short term due to lower license fees. Architectural adaptability will save you tens of thousands of dollars on the short term purchase, as well as, long term maintenance costs.

**Let's Recap. What are the top five reasons to purchase EDGE'S software over the carousel OEM's?**

1. More Functionality
2. Use Multiple Manufacturer's Carousels in one site
3. Lower Cost
4. Windows, SQL Server & Oracle
5. Upgradeable to a Full WMS

**Save space. Reduce labor. Increase your inventory and shipping accuracy. Reduce your product handling. That's what a properly engineered and integrated carousel system can do for you.**

**By adapting to your operations, streamlining your business, helping with your mission critical items, and getting your products to your customers on-time, we'll save you time and money year after year. So look to the future and give us a try. We know you'll be totally satisfied.**

**For a complete list of our products, a brochure, or the name of the EDGE dealer nearest you, call us.**
